OPERATING PRINCIPLE

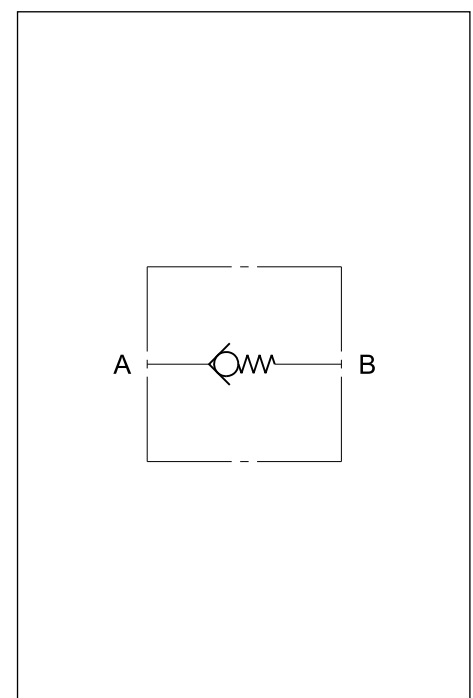

- VD*-W* valves are check valves with threaded “BSP” ports for mounting in-line on hydraulic lines.
- They allow the flow to pass freely in one direction, blocking it in the opposite direction.
- In rest conditions, the valve poppet is kept closed by a spring. The poppet opens when the pressure in the intake line “A” exceeds the set value of the spring, added to any pressure in the outlet line “B”.
- Available in eight sizes for flow rates of up to 850 l/min and with five different cracking pressures.

HYDRAULIC SYMBOL

1 - IDENTIFICATION CODE

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4.
 Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.
 The fluid must be preserved in its physical and chemical characteristics.
