## PROPORTIONAL PRESSURE REDUCING VALVE, DIRECT OPERATED, WITH INTEGRATED ELECTRONICS

**SUBPLATE MOUNTING  
ISO 4401-03**

**p max 100 bar  
Q max 15 l/min**

### MOUNTING INTERFACE

### OPERATING PRINCIPLE

- The ZDE3G\* are direct operated pressure reducing valves with electric proportional control and integrated electronics and with mounting interface in compliance with ISO 4401 standards.
- The valves are used to reduce pressure in the secondary circuit branches thus ensuring stability of controlled pressure in the event of variations of the flow rate through the valve.
- They are available with different types of electronics, with analogue or fieldbus interfaces.
- A solenoid current monitoring signal is available.
- The valve is easy to install. The driver directly manages digital settings.

### 3.2 - On-board electronics diagrams

#### VERSION A - External Enable

#### VERSION B - Internal Enable

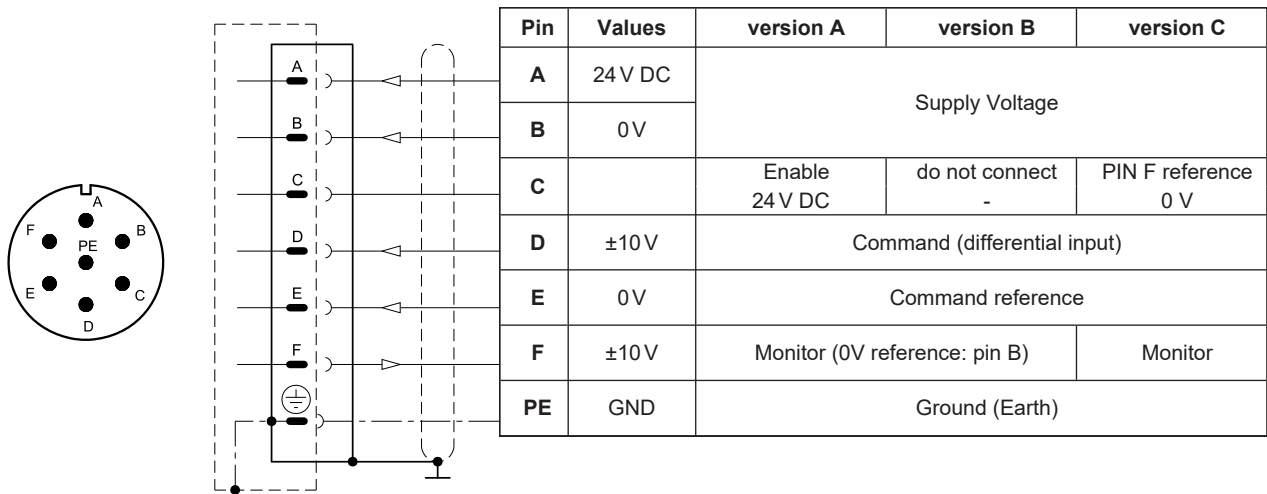

#### VERSION C - 0V Monitor

### 3.3 - Versions with voltage command (E0)

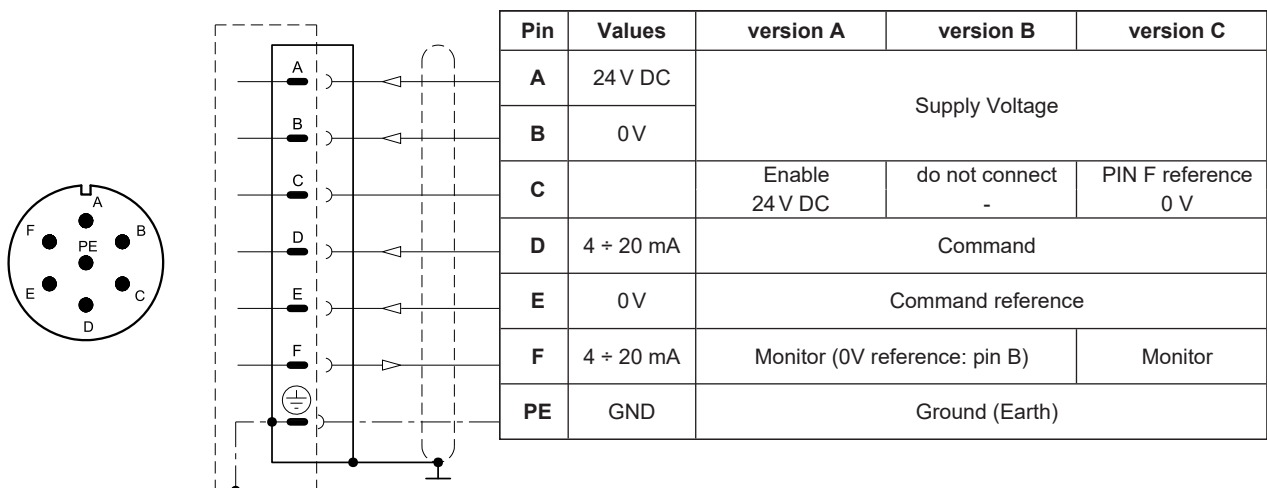

The reference signal is between -10V and +10V on double solenoid valve, and 0 + 10V on single solenoid valve SB. The monitor feature of versions B and C becomes available with a delay of 0.5 sec from the power-on of the card.

### 3.4 - Versions with current command (E1)

The reference signal is supplied in current  $4 \pm 20$  mA. If the current for command is lower, the card shows a breakdown cable error. To reset the error is sufficient restoring the signal.

The monitor feature of versions B and C becomes available with a delay of 0.5 sec from the power-on of the card.

## 10 - ZDE3GH - OVERALL AND MOUNTING DIMENSIONS

## 11 - MANUAL OVERRIDE

These valves have solenoids whose pin for manual operation is integrated in the tube. Actuate this override by pushing it with a suitable tool, minding not to damage the sliding surface.

Three other types of manual overrides can fit the ZDE3GL valve:

- **CM** version, manual override boot protected
- **CS** version, with metal ring nut provided with a M4 screw and a blocking locknut to allow the continuous mechanical operations.

**CAUTION!** The manual override use doesn't allow any proportional regulation; indeed using this kind of override, the main stage spool will open completely and the whole inlet pressure will pass through A or B line.

## 12 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

## 13 - INSTALLATION

ZDE3G\* valves can be installed in any position without impairing correct operation. Ensure that there is no air in the hydraulic circuit. Connect the valve T port directly to the tank. Add any backpressure value detected in the T line to the reduced pressure value.

**Maximum admissible backpressure in the T line, under operational conditions, is 30 bar.**

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed, fluid can easily leak between the valve and support surface.

## 14 - ACCESSORIES

(to be ordered separately)

### 14.1 - Mating connectors

Mating connectors must be ordered separately. See catalogue 89 000.

For K11 and K16 versions we recommend the choice of a metal connector to avoid electromagnetic disturbances and to comply with EMC regulations on electromagnetic compatibility. If you opt for a plastic connector, make sure that it guarantees and maintains the IP and EMC protection characteristics of the valve.

### 14.2 - Mating connectors and caps for fieldbus communication

Duplomatic offers spare parts to be wired and also ready-to-use cord sets. Please refer to cat. 89 000.

### 14.3 - Connection cable

The optimal wiring provides for 7 isolated conductors, with separate screen for the signal wires (command, monitor) and an overall screen.

Cross section for power supply:

- up to 20 m cable length : 1,0 mm<sup>2</sup>
- up to 40 m cable length : 1,5 mm<sup>2</sup> (IO-Link excluded)
